PATENT

SUBSTRATE WITH A PHOTOCATALYTIC COATING

Applicant: SAINT-GOBAIN RECHERCHE

ABSTRACT

The subject-matter of the invention is a substrate comprising a fibrous material which is provided, over at least a portion of its surface and/or within its thickness, with a coating with photocatalytic properties comprising a semi-conducting material with photocatalytic properties of the oxide or sulphide type.

Another subject-matter of the invention is its process of manufacture and its applications.
